Combating WMD JIC

MAJ Randy Klingaman

USSTRATCOM Center for Combating WMD

9 January 2007

Overview of Concept

- **Military Problem:** The JFC lacks the full range of capabilities to proactively and comprehensively dissuade, defeat, deter or mitigate the actions of multiple networks of WMD seekers, possessors, and proliferators. These networks
  - Are multifunctional and multidimensional
  - Consist of state and, increasingly, independent non-state actors
  - Are dynamic, adaptive and can be transnational
  - Have differing motivations and desired endstates
  - Operate in secrecy to avoid detection and counter-action
- **Scope:** This JIC describes how a JFC will conduct future (8-20 years) CWMD operations within a Joint, Interagency, and Multinational context. The JIC addresses integration of military capabilities through the synchronization of CWMD mission areas and strategic enablers (as described in the NMS-CWMD) against WMD network functions:
  - Finance
  - Logistics
  - Intelligence, surveillance and reconnaissance
  - Science and Technology
  - Weapons delivery
  - Command and control

UNCLASSIFIED

Overview of Concept

- **Proposed Solution:** CWMD requires a comprehensive understanding of WMD actors and execution of a wide-ranging campaign that integrates all elements of USG, allied, and partner national power
- **Ends:** The United States, its forces, allies, partners and interests are neither coerced nor attacked by WMD
- **Ways:** The JFC, in support of Unified Action, will direct the simultaneous and synchronized application of lethal and non-lethal capabilities across multiple domains against enabling networks to meet Military Strategic Objectives described in NMS-CWMD
- **Means:** Fully Integrated US and non-US capabilities linked across components and echelons of command and enabled by a common information environment
